Collaboratories...

- Laboratories without walls
- Connect people to
 - Expensive equipment
 - Large data sets
 - Each other
- for the basic conduct of science and engineering

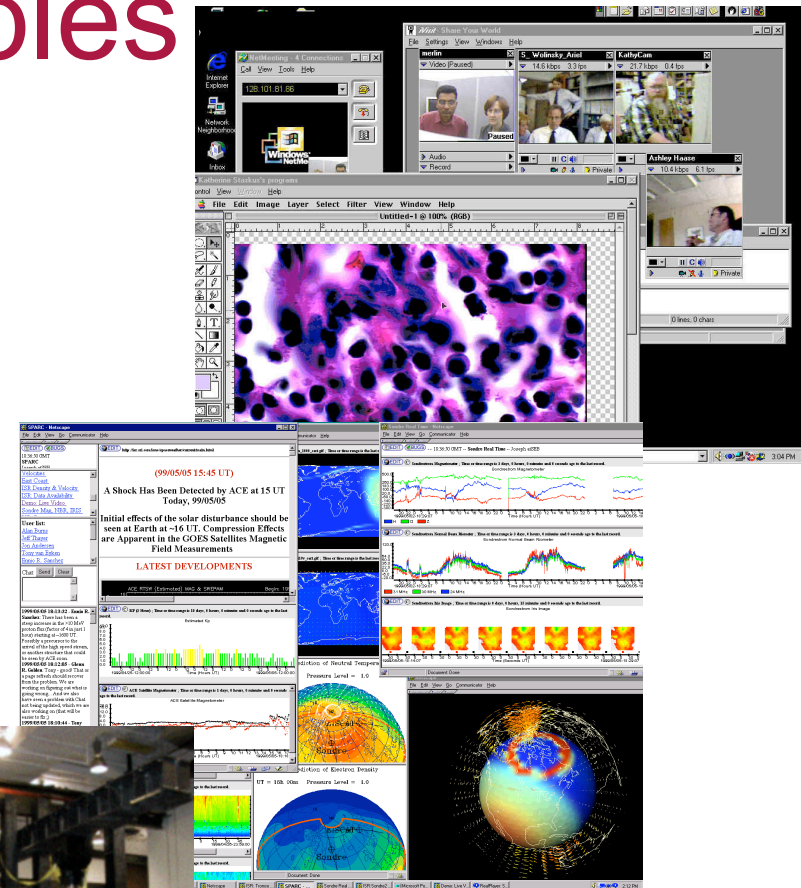

An alliance to advance understanding of collaborative research

SCHOOL OF INFORMATION
UNIVERSITY OF MICHIGAN

Examples

- Great Lakes CFAR
- UARC/SPARC
- NEES

An alliance to advance understanding of collaborative research

UNIVERSITY OF MICHIGAN

Science of Collaboratories Project

- Perform a comparative analysis of collaboratory projects
- Develop general principles and design methods
- Test these principles on existing or upcoming collaboratories
- Develop of a Collaboratory Knowledge Base
 - technical and social data and detailed findings from existing collaboratory projects

An alliance to advance understanding of collaborative research

An alliance to advance the understanding of collaboratories

Science of Collaboratories Home

For more than a decade a number of collaboratory projects have been carried out in a variety of scientific and engineering fields. Most collaboratories have been built as one-off, hand-crafted projects. We seek to change this. The Science of Collaboratories (SOC) project is devoted to understanding the technical and behavioral principles that can lead to better, more successful design of collaboratories in the future. Please explore this web site to learn more about:

- the SOC project [overview](#),
- our [mission](#)
- the project [activities](#)
- the [partner organizations](#) involved
- the [research team](#)
- and, as the project proceeds, [our findings and results](#).

Collaboratory

The diagram illustrates the 'Collaboratory Triangle' with three vertices and a central node. The top vertex is 'Communication, Groupware, Services' with a blue double-headed arrow labeled 'people-to-people' above it. The bottom-left vertex is 'Digital Libraries, E-Pub' with a green double-headed arrow labeled 'access to information' to its left. The bottom-right vertex is 'Interaction with the Physical World' with an orange double-headed arrow labeled 'access to facilities' to its right. A central box labeled 'Distributed, media-rich information' is connected to all three vertices by double-headed arrows. The entire diagram is labeled 'Collaboratory Triangle image'.

Collaboratories at a Glance

- Collect a large set of collaboratories
 - We have identified almost 200 examples
- Collect a basic set of information
- Note similarities and differences on both technical and social dimensions

Resources : Collaboratories at a Glance -- Alphabetical

Project Name	Start Date	Primary Function
A Toroidal LHC ApparatuS (ATLAS)		
Alcator C-Mod Tokamak Fusion Research Project		
Alliance for Cellular Signaling (AfCS)	1999	Distributed Research Center
Arizona Telemedicine Program (ATP)	1993	Expert Consultation
Astrophysics Simulation Collaboratory (ASC)		Distributed Research Center
Baltimore Washington Collaboratory (BWC)	1996	Community Data Systems
Bay Area Science Museum Learning Collaboratory		Virtual Learning Community
Berkeley Structural Genomics Center (BSGC)	2001	Distributed Research Center
BioImage		Community Data Systems
Biological Collaborative Research Environment (BioCoRE)	1998	Distributed Research Center
Biomedical Informatics Research Network: Coordination Center (BIRN CC)	2001	Distributed Research Center
Biomedical Informatics Research Network: Brain Morphometry (Morphometry BIRN)	2001	Community Data Systems
Biomedical Informatics Research Network: Function (fBIRN, FIRST BIRN)	2002	Community Data Systems
Biomedical Informatics Research Network: Mouse (MBIRN)	2000	Community Data Systems
Biomolecular Interaction Network Database (BIND)		Community Data Systems
Botswana-Harvard AIDS Institute Partnership for HIV Research and Education (BHP)	1996	Distributed Research Center
Bugscope	1999	Shared Instrument
Campbell Collaboration (C2)	2000	
Canadian Institute for Advanced Research - New Investigators Network (CIAR NIN)	2002	Virtual Community of Practice
Cell Migration Consortium (CMC)	2001	Distributed Research Center
Center for Behavioral Neuroscience (CBN)	1998	Distributed Research Center
Center for Eukaryotic Structural Genomics (CESG)	2000	Distributed Research Center

Theory of Remote Collaboration (TORC)

- Factors that lead to success in remote science and engineering
- Based on SOC cases and literature
 - Social studies of science
 - Sociology
 - Social psychology
 - Computer supported cooperative work

An alliance to advance understanding of collaborative research

SCHOOL OF INFORMATION
UNIVERSITY OF MICHIGAN

What is Success?

- Effects on the Science itself
- Effects on Science Careers
- Enhanced Science Education
- Inspiration to others
- Public perception
- Reuse of collaboratory tools

An alliance to advance understanding of collaborative research

SCHOOL OF INFORMATION
UNIVERSITY OF MICHIGAN

Factors That Affect Success

- The Nature of the Work
- Common Ground
- Collaboration Readiness
- Management, Planning and Decision Making
- Technology Readiness

An alliance to advance understanding of collaborative research

SCHOOL OF INFORMATION
UNIVERSITY OF MICHIGAN

Technical readiness

- Right functionality, easy to use
- Comfortable with the technology
 - People can't make too big a leap
- Technology gives benefit to participants
- Reliable
- Common platform
- Adequate networking

An alliance to advance understanding of collaborative research

Technical readiness

- Technical support at each location
- Technical coordinator
- If data sharing: defacto standards
- If instrument sharing: certify remote users

An alliance to advance understanding of collaborative research

SCHOOL OF INFORMATION
UNIVERSITY OF MICHIGAN

The nature of the work

- The more partitionable the work, the easier it is to do long distance
 - May not want total independence
 - Need interaction to avoid drift
 - Some success with standardization

An alliance to advance understanding of collaborative research

SCHOOL OF INFORMATION
UNIVERSITY OF MICHIGAN

Common ground

- Mutual knowledge, beliefs and assumptions
- People who have worked together before successfully presumably have worked this out
- Common vocabulary
- Common management or working style

An alliance to advance understanding of collaborative research

SCHOOL OF INFORMATION
UNIVERSITY OF MICHIGAN

Veinott et al study

- The less common ground you have, the more you need high bandwidth and rapid interaction for communication
 - Pairs of Native English speakers do not need video to communicate
 - Pairs of Non-native English speakers are *much* better when they have video as well as audio

An alliance to advance understanding of collaborative research

SCHOOL OF INFORMATION
UNIVERSITY OF MICHIGAN

Collaboration readiness

- The community has to have a spirit of collaboration.
- Motivation to work together:
 - Mix of skills
 - Greater productivity
 - Like working together
 - Something in it for everyone
 - NOT
 - Mandate from the funder
 - The only way to get the money
 - Asymmetries in value, etc.

An alliance to advance understanding of collaborative research

Collaboration Readiness

- Trust
 - Reliable
 - Produce high quality work
 - Have their best interests at heart
- Goals aligned
- Group self-efficacy

An alliance to advance understanding of collaborative research

SCHOOL OF INFORMATION
UNIVERSITY OF MICHIGAN

Management, planning, and decision making

- Principals have time to do the work
- Distributed participants can communicate in real time > 4 hrs a day
- There is a critical mass at each location
 - And a point person at each location

An alliance to advance understanding of collaborative research

SCHOOL OF INFORMATION
UNIVERSITY OF MICHIGAN

Management, planning, and decision making

- Management plan
- Project manager is respected and has project management experience
- Communication plan
- Plan has room for reflection and redirection

An alliance to advance understanding of collaborative research

SCHOOL OF INFORMATION
UNIVERSITY OF MICHIGAN

Management, planning, and decision making

- No legal issues remain
- No financial issues remain
- Knowledge management system
- Decision making is
 - Free of favoritism
 - Fair and open
 - Everyone has opportunity to influence

An alliance to advance understanding of collaborative research

SCHOOL OF INFORMATION
UNIVERSITY OF MICHIGAN

Promise and Perils

- Promise
 - Better, more ambitious science
 - Better science education
 - Greater outreach
 - Benefits beyond science & engineering
- Perils
 - Success not inevitable as technologies evolve
 - Success is a mix of social and technical factors
 - Likely to be unanticipated effects
 - Science often on the leading edge

An alliance to advance understanding of collaborative research

SCHOOL OF INFORMATION
UNIVERSITY OF MICHIGAN

Implications of TORC

1. Suggest design of high-value technologies
2. Provide a framework for conducting evaluations
3. Serve as a tool for strategic planning

An alliance to advance understanding of collaborative research

SCHOOL OF INFORMATION
UNIVERSITY OF MICHIGAN

Design for high-value technologies

- One very common approach to collaborative systems design is to support constant conversation as in collocated work
- An alternate approach is to target one or more of the social processes related to success

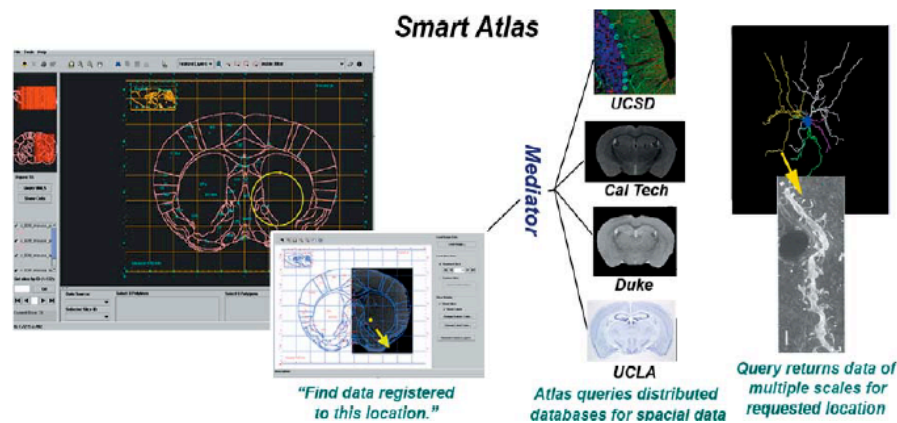

An alliance to advance understanding of collaborative research

SCHOOL OF INFORMATION
UNIVERSITY OF MICHIGAN

Examples

- Ways to negotiate common ground
 - Conduct weekly technical meetings via video to report out on what each site was doing
 - Use other tools to reconcile vocabulary differences
 - BIRN brain atlas
 - Use modelling languages to “sketch”

An alliance to advance understanding of collaborative research

SCHOOL OF INFORMATION
UNIVERSITY OF MICHIGAN

Opportunities to improve collaboration support by...

- Tools for important social processes
- Abstract representations of information
 - Rather than mimetic approaches based on conversation
- Flexible enough to break the rules of the system

An alliance to advance understanding of collaborative research

SCHOOL OF INFORMATION
UNIVERSITY OF MICHIGAN

Framework for conducting evaluations

- Traditionally evaluation in science projects has focused on summative (end) evaluations
- Useful for formative (ongoing) evaluations
 - TORC as a checklist
 - E.g. Is there trust, common ground, transparent decision making process...

An alliance to advance understanding of collaborative research

SCHOOL OF INFORMATION
UNIVERSITY OF MICHIGAN

A tool for strategic planning

- Help organizations decide what projects to participate in.
- How to build organizational capacity for collaboration
 - Internal processes that support cross-institutional work

An alliance to advance understanding of collaborative research

SCHOOL OF INFORMATION
UNIVERSITY OF MICHIGAN

Summary

- Theory of Remote Collaboration
 - Variety of measures of success
 - Key features:
 - Nature of work
 - Common ground
 - Collaboration readiness
 - Management
 - Technology readiness
 - Useful for
 - Suggesting new technologies
 - Ongoing evaluation
 - Strategic Planning

An alliance to advance understanding of collaborative research
